## Mobile Vignette Ad

Mobile Vignette Ad appears in full-screen mode as you move between pages.

When ad appears, it pauses to move to the page you choose. When you close the layer, the transition resumes.

The product consists of two modules: Ad Wrapper and Ad Content.

### Ad Wrapper

Below you can find more details regarding the way Mobile Vignette Ad works:

- The Ad is displayed on the full-screen
- The layer always covers the remaining elements of the service (visible in the foreground)
- The Ad is centered relative to the layer
- Mobile Sticky Ad is only available on mobile devices
- Mobile device recognition is based on headers of the browser or a browser (Device by UserAgent) or the width of the screen (`window.innerWidth`)
- For screen width check-in versions of the product, you can limit the value to which mobile mode will be displayed (in pixels)
- Closing of the layer is aligned to the top edge of the ad layer
- When you close the layer, the layer disappears and you go to the page you selected earlier (click on the link on the page you selected)
- Ability to restrict links to specific domains
- When you close the layer, it is not possible to call again, capping is set to 30 minutes
- Ability to specify the number of clicks after you call your ad layer

## **Ad Content**

- The ads and demand come from Google Ad Manager, AdExchange and Header Bidding via Prebid.js

## **Browser compatibility**

- Google Chrome Mobile
- Safari Mobile
- Mozilla Firefox Mobile
